Mortisco more more than the cell may be implicated in the cell direct repeat elements (1) may be implicated in the cell direct repeat elements (1) may be implicated in the cell director vocal manner and a constant states (1) and more of constant states (1) and included the putative ATP binding site. Choose included within the category of so-called 'start genes', encoding proteins which are required in early G1, when the cell is faced with the option of initiating a further cell cycle.
                                                                                                                                                                                                                                                                                                            1 (bases 1 to 3849)
Barker, D. G., White, J. H. and Johnston, L. H.
The nucleoride sequence of the DNA ligase gene (CDC9) from
Saccharomyces cerevisiae: a gene which is cell-cycle regulated and
induced in response to DNA damage

Claim 2: Page 31: 41pp; English.

Interleukin-1-alpha (IL-1-alpha) primers 4 and 3 (v32395) were used to amplify the IL-1alpha gene region to identify single base variation amplify the IL-1alpha gene region to identify single base variation of polymorphism of c/T at base 889. The invention claims to provide a method for predicting the risk of sight threatening diabetic retinopaty. The method involves isolating DNA from a patient and determining the DNA polymorphism pattern of the genes that code for interleukin-1-alpha, interleukin-1-beta and interleukin-1RN. The polymorphic pattern is thereby identifying patients carrying a genetic polymorphism patterns thereby identifying patients carrying a genetic polymorphism cascociated with increased risk of sight threatening diabetic retinopathy. The method may be able to identify diabetic patients at risk before the clinically detectable disorders occur. Polymorphism pattern cattern and in genes involved PCR reactions using primers v32389-v32389. The method is also claimed to be useful in conjunction with catering in genes involved effects. In identifying diabetic retinopathy in genomic DNA and therefore, in identifying diabetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New method of determining a patient's susceptibility to inflammatory disorders - by detecting the presence of an IL-1 (44112332)

Thaplotype, useful in designing treatment strategies that modulate the activity of proteins produced by the IL-1 gene cluster

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                29-APR-1999 (first entry)
Interleukin 1 (44112332) haplotype PCR primer #6.
Interleukin 1: IL-1; haplotype; inflammatory disorder; alopecia areata; coronary artery disease; osteoporosis; nephropathy; diabetes mellitus; Graves disease; systemic lupus erythamatosus; lichen sclerosis; ulcerative colitis; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
Predicting increased risk of sight-threatening diabetic retinopathy

    comprises identifying genetic polymorphism pattern for genes
    IL-1A, IL-1B and IL-1RN, useful to allow treatment before clinical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

         disease associated haplotype enables determination of which alleles are causative, and this information is useful in designing treatment strategies, including gene therapy and treatment using various agents that modulate the activity of proteins produced by the IL-1 gene cluster. Some alleles from the IL-1 gene cluster are associated with particular inflammatory diseases, and insufficient IL-1 production appears to act centrally in the pathology of these diseases. Therefore, the use of IL-1 gene clusters is useful in determining genetic susceptibility to liftlammatory diseases, including those with a multifactorial etiology with a multifactorial etiology

                                                                                                                                                                                                                                                                                                                        Gaps
                                                P-PSDB; P50361.

New peptide(s) useful in treatment of myasthenia gravis - also in diagnosis, having acetyl:choline receptor-alpha like activities. Disclosure: Fig 1: 13pp; Japanese.

Peptides derived from the hACR-alpha gene product have similar immunogenicity to the gene product, and may be useful in the treatment and diagnosis of myasthenia gravis caused by neuropathy in
                                                                                                                                                                         autoimmune reaction to ACR.
The sequence given contains breaks in some of the introns, at these locations 60 N residues have been inserted to preserve integrity. Sequence 4708 BP; 1124 A; 1059 C; 965 G; 1200 T;

DNA having the genetic information of urea amidolyase originated from Saccharomyces yeast - can be used to prepare high purity urea amidolyase by culturing the transformant comprising the DNA claim 1; Page 10-17; J7pp; Japanese.
This sequence encodes a protein which has urea amidolyase (URL)-activity and is derived from yeast. This sequence may be used within a recombinant plasmid for the production of highly pure URL. Sequence 6265 BP; 1873 A; 1156 C; 1361 G; 1875 T;

The Present sequence is the CDNA of the hepatitis E virus (HEV) strain SAR-55, which was implicated in an enterically transmitted non-A, non-B hepatitis in Pakistan. The protein encoded by the structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV antibodies (pref. IgG or IgM) in blood, plasma, sera, and anti-HEV antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection. The protein is identified as a band of greater than 50 kD
stimulate the production of protective antibodies upon injection into a mammal that would serve to protect the mammal upon challenge with wild type HEV. The proteins can be used for detection and diagnosis of HEV infection. This CDNA was isolated from primates innoculated with stool suspensions obtained from hepatitis E patients.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                      to transcription prods. of genes, useful for tagging genes, mapping chromosomes and tissue typing claim 3; page 86; 199pp; English.

This sequence tepresents an EST (expressed sequence tag) ESTs are markers for human genes actually transcribed in vivo. Unlike the random genomic DNA sequence tagged sites (STSs), ESTs point directly to expressed human genes within a few years at a fraction of the cost of complete genomic sequencing. Using PCR primers (39419-Q39580 (sequences designed from the ESTs) sublocalisation of an EST can be achieved with panels of fragments from specific chromosomes or pools of large genomic clones in analogous manner. This sequence represents EST00020.

Claim 1: Page 220-224; 1409pp; English.

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the nucleotide sequences SEQ ID No: 1 to 391 (V52134 to V5254) recorded to SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to SEQ ID No: 1 to 391, where the nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae CC pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae CC by a process comprising: (a) screening a genomic DNA library using as a process comprising: (a) screening a genomic DNA library using as a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO: 1 that hybridise to the target sequence and isolating mena, produced completification primers derived from the members; or (b) isolating mRNA, DNA or CDNA produced from the members; or (b) isolating mRNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide configuration to the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be consed in diagnosis kits and assays, and pharmaceutical commencial manner of the S. pneumoniae genome. Products from the present convention can be used in diagnosis kits and assays, and pharmaceutical

A. thaliana cDNA for citrate synthase. The oligos additionally introduce BamHI cleavage sites at both ends of the amplified cDNA fragment. a cDNA library was prepd. from potato leaves and screened with A. thaliana citrate synthase cDNA. Positive clones were purified and sequenced. The nt sequence is given in T04199. Sequence 1891 BP; 512 A; 370 C; 425 G; 584 T;

Doubla-stranded cDNA was ligated to Eco RI adaptors (Pharmac.2.), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT773 vector. Library is normalized. Library was constructed by Bento Scares and M. Facima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cord. Site_2: Xhol; ds-CDNA molecules were generated acfollows. First-strand CDNA molecules were generated acfollows. First-strand CDNA was prepared from oligo-dr selected mRNA by priming with an Xhol oligo-dr primer. The resulting DNA:RNA hybrid was treated with RNase H and user, as a template for DNA POII-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-CDNAs were digested with XhoI and size-selected. The resulting molecules were directionally cloned into the EcoRI and XhoI sites of the pET30a plasmid (Novagen)."

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made iform the same library (cloneIDs 1257096-1258631, 1469064-1470983, and 1475592-1476743). Subtraction by Bento Soares and M. Patima Bonaldo. "subtraction by a 102 c 107 g 89 t

```
3'); double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. RNA provided by Dr. Bertrand Jordan. Library went through three rounds of normalization, and was constructed by Bento Soares and M. Patima Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note="Vector: pT7T3D-Pac (Pharmacia) with a modified bobylinker; Site_1: Not I: Site_2: Eco RI: 1st strand cDNA was primed with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) primer [5' refined with a Not I - oligo(dT) prime

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences from Streptococcus consuments of the present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genome (SEQ ID NO:1 that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced from the members; or (b) isolating mRNA, DNA or CDNA produced sequence is homologues to amplification primers derived from the cragment of the S. pneumoniae genome to prime the amplification and computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present compositions and vaccines for S. Dneumoniae genome. Products from the present compositions and vaccines for S. Dneumoniae genome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hybridisation probes for detecting non-viral microorganisms -
derived from spacer region between 16S and 23S rRNA genes, for
detecting e.g. BORDETELLA PERTUSSIS, NEISSERIA GONORRHOEAE
Disclosure: Fig 3: 41pp: English.
This sequence is the non-coding strand of the 16S-23S rRNA gene
spacer region: the 5-end is proximal to the 16S rRNA gene and the 3'-end proximal to the 23S rRNA gene. The sequence is very similar
to the corresponding region in Ngonorrhoeae ITM 4367. A set of
probes was designed based on this sequence which was specific for
N.gonorrhoeae. A kit is provided for detection of N.gonorrhoeae
engange.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
20-JAN-1993 (first entry)
Encodes exons XV to XVII of human hepatocyte growth factor.
HGF: enhance growth: preparing transgenic animals; hepatic disease;
Clinical diagnostic reagent; drug.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 22; 28pp; Japanese.
This sequence contains exons XV to XVIII of human hepatocyte growth factor. See also R25676-92, Q26713-27.

21 Rossau R, Van Benes, for detecting e.g. BORDETELLA PERTUSSIS, NEISSERIA GONORRHOEAE

25 BORDETELLA PERTUSSIS, NEISSERIA GONORRHOEAE

26 Spacer region: the 5'-end is proximal to the 16S-23S rRNA gene

27 This sequence differs in just one

28 Spacer region: the 23s rRNA gene. The sequence differs in just one

29 Position from the corresponding region in N.gonorrhoeae and this sequence which were specific for N.gonorrhoeae. A kit is provided

20 Cor detection of N.gonorrhoeae using the probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hybridisation probes for detecting non-viral microorganisms -
derived from spacer region between 16S and 23S rRNA genes, for
detecting e.g. BORDETELLA PERTUSSIS, NEISSERIA GONORRHOEAE
Disclosure; Fig 3: 41pp: English.
This sequence is the non-coding strand of the 16S-23S rRNA gene
spacer region: the 5'-end is proximal to the 16S rRNA gene and the 3'-end proximal to the 23S rRNA gene. A set of probes was designed
based on this sequence which was specific for N.meningitidis. A kit
is provided for detection of this species using the probes.

PT Polynucleotide(s) and proteins derived from Staphylococcus aureus - PT Polynucleotide(s) and proteins derived from Staphylococcus aureus - Stored on computer readable medium and used in the production of anti-S.aureus vaccines

PT Claim 1: Page 2593-2640: 3271pp; English.

C Taim 1: Page 2593-2640: 3271pp; English.

C This sequence represents one of 5191 Staphylococcus aureus DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access to medium, preferably selected from a floppy or hard disk, random access the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are including entities and these polypeptides can composition against S.aureus infection. The be used in a vaccine composition against S.aureus infection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, concluding cellulitis, eyelid infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can also mean a reinare or number of number for isolating

Class I 1991-tRNA synthetase useful for treating infections by Borrella or Treponema

Example 3: page 49: 51pp: English.

Example 3: page 49: 51pp: English.

The present invention describes class I-type lysyl-tRNA synthetase (I).

(I) is used: (i) to diagnose infection by pathogens that express (I) but of class II-type lysyl-tRNA synthetase (Ia), particularly infections by Borrella or Treponema, specifically Lyme disease or syphilis; and (ii) to screen for specific inhibitors of (I), potentially useful as therapeutic agents in human and veterinary medicine. Nucleic acid encoding (I) is used as a source of probes for diagnosing infection by (I) producing pathogens. Since (I) is fundamentally different from the class II enzyme (Ia) producing hosts or beneficial microorganisms. The present sequence represents Borrella burgdorferi t-RNA synthetase Lysl DNA sequence, from an example of the present invention.

                                                                                                                                                                                                                                            claim 1; Page 898-902; 2084pp; English.

Claim 1; Page 898-902; 2084pp; English.

A computer readable medium has been developed which has recorded on it 92 nucleotide sequences isolated from the Enterococcus facealis genome.

X12938 to X13919 represent these nucleotide sequences which are primary can identify fragments of the Enterococcus facealis genome with commercial importance. The products can be used to detect the presence of Enterococcus facealis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus facealis, or another related organism, in vivo or in vitro. In particular the control of prevent or another or another or another or another coccus facealis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

New nucleic acid encoding human retinal degradation polypeptide -
The present seed to diagnose neurological disease and to identify
and related probes, vectors, transformed cells, proteins and
antibodies, used to diagnose neurological disease and to identify
specific modulators with possible therapeutic activity
by specific modulators with possible therapeutic activity

Disclosure; page 36-37; 59pp; Englash.

CC The present sequence represents the human retinal degeneration B2 cDNA
(hrdgB2), the product of which is a non-receptor tyrosine kinase binding
CC protein. The isolation of this cDNA involved the amplification of an EST
CC subcloned, sequenced and then used as a probe to secreen a human fetal
C brain cDNA library. The clone obtained was used as a probe to rescreen
the same library, from this seven clones were found, subcloned and
C brain cDNA library. The clone obtained was used as a probe to rescreen
the same library from this seven clones were found, subcloned and
C brain cDNA library. The clone obtained was used as a probe to rescreen
the same library from this seven clones were found, subcloned and
C protein has been found to be expressed in the brain, heart, thymus and
C peripheral blood leukocytes, it contains a PIT domain, and a Pyk2 binding
CC domain and is thus concerned with recycling synaptic vesicles and
regulating neurotransmitter signalling respectively. This protein is
C seen to be involved in signalling reasectively. This protein
C would be useful in diagnosis, treatment, and prevention of the following
C diseases: myasthenia qravis; neuroblastoms; thrombosytopaenia; stroke;
                            That protein encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. aureus infection. The polypeptides can also be used in a Rit for the immunodetection of S. aureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences fond their fragments) are useful as primers or probes for isolating computer redable medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human retinal degeneration B2 polynucleotide (hrdgB2).

Non-receptor tyrosine kinase binding protein; screening; brain; heart; thymus; leukocytes; human fetal brain; PIT domain; Pyk2 binding domain; synaptic vesicles; neurotransmitter signalling; myasthenia gravis;
S.aureus DNA sequences allows putative functions to be assigned so

New isolated nucleic acid encoding the new human cytokine Tango-77 - New isolated nucleic acid encoding the new human cytokine Tango-77 - BT New isolated nucleic acid encoding the new human cytokine Tango-77 - Stample 5; Figure 3: 226pp; English.

X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-Ira. Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a confiammation by binding to the interleukin-1 receptor (IL-IR). It may also bind to a new receptor so could regulate other cellular processes conditional interleukins, especially in the new conditions also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and conditions associated with abnormal levels of inflammation, or activity
                                                                                                          Sumption occurs. Since the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human IL-1ra BAC contiguous DNA sequence 33.

Hango-7; human; IL-1ra: cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-1R; requlation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; Homo sapiens.

When we though of determining a patient's susceptibility to inflammatory disorders - by detecting the presence of an IL-1 (44112332)

The property is detecting the presence of an IL-1 (44112332)

The property is designing treatment strategies that modulate

The activity of proteins produced by the IL-1 gene cluster

CC A method has been developed for determining a patient's susceptibility

CC A method has been developed for determining a patient's susceptibility

CC A method has been developed for determining a patient's susceptibility

CC A method has been developed for determining a patient's susceptibility

CC A method has been developed for determining a patient's susceptibility to an inflammatory

CC patient, where its presence indicates susceptibility to an inflammatory

CC disorder. X16607 to X16631 represent PCR primer used in the method for

CC detecting the IL-1 (44112332) haplotype. The method provides kits for

CC detecting the IL-1 (44112332) haplotype. The method provides kits for

CC disorders, including coronary artery disease, osteoporosis, nephropathy

CC disorders, including coronary artery disease, osteoporosis, nephropathy

CC disorders, including coronary areata, Graves disease, systemic lupus

CC alabettes mellitus, alopecia areata, Graves disease, systemic lupus

CC disorders, including diabetic retinopathy, juvenile chronic arthitis,

CC allowed insulin dependent diabetes. The identification of a

CC ausative, and this information is useful in designing treatment

CC causative, and this information is useful in designing treatment

CC some alleles from the IL-1 gene cluster are associated with particular

CC fone alleles from the IL-1 gene cluster are associated with particular

CC fone alleles is useful in determining genetic susceptibility to

CC inflammatory diseases, including those with a moliven component component.
                                                                                                                                                                                                                                                                29-APR-1999 (first entry)
Interleukin 1 (44112332) haplotype PCR primer #5.
Interleukin 1: IL-1; haplotype; inflammatory disorder; alopecia areata; coronary artery disease; osteoporosis; nephropathy; diabetes mellitus; Graves disease; systemic lupus erythamatosus; lichen sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
